

Zachary Mineiko

708-321-0211 | zmineiko@gmail.com | [linkedin.com/in/zak-mineiko](https://www.linkedin.com/in/zak-mineiko) | zakmineiko.com | Chicago, IL

EDUCATION

University of Iowa, College of Engineering

B.S. in Electrical Engineering, Computer Science Focus

Coursework: SW Design, Computer Arch., Graph Algorithms & Combinatorial Optimization, Generative Artificial Intelligence

May 2025

Iowa City, IA

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, C, SQL, Java, C++, React, Next.js, Bash

Infrastructure/Tools: AWS (S3, EC2, Lambda, R53), Docker, GCP, PostgreSQL, REST APIs, CI/CD, Git, Agile

OS: MacOS, Linux (Kali Linux, Ubuntu, Debian), Windows

EXPERIENCE

Full Stack Engineer (Contract)

Aug 2025 – Present

FlipWyz

Remote

- Architect and design a production ready cross platform marketplace web app with React Native and Supabase
- Optimize PostgreSQL + PostGIS queries to improve geospatial latency across large datasets
- Integrate Stripe for multi-party split payments, transactional integrity, and real time checkout synchronization
- Design and implement structured data flows and API integrations for listings, payments, address validation, and logistics, ensuring consistency and referential integrity across services
- Apply analytical and data driven problem solving to enhance query performance and reduce latency
- Implement modular and efficient component abstractions to reduce render overhead and improve responsiveness

Software Engineer (Full Stack)

Dec 2024 – Jun 2025

Outsider

Remote

- Spearheaded development of a mobile social media app using React Native, Expo, Tailwind CSS, and Supabase, delivering a functional MVP within 6 weeks
- Led a 3-person development team by establishing sprint-based workflows and managing task delegation through weekly planning meetings, improving development efficiency by 40%
- Established standardized development workflows to improve team consistency and code quality, resulting in fewer merge conflicts and smoother sprint cycles
- Integrated Supabase for user authentication, management, and storage, enabling real-time synchronization and simplified backend architecture

Engineering Technician Intern

Mar 2022 – Aug 2022

Firefly

Chicago, IL

- Gained expertise in firmware and hardware troubleshooting for digital billboards deployed on taxis and rideshare vehicles
- Transformed Chicago branch performance from worst to best through effective diagnostic and repair strategies
- Led a mass data collection and automation initiative using Python, OpenCV, and Matplotlib to automate data entry
- Engineered efficient repair workflows resulting in a 20% increase in daily fixed screens
- Participated in Agile development processes by contributing to weekly stand-ups and sprint planning

PROJECTS

nibbleMate – Automatic Cat Feeder | *C, React Native, Expo, PostgreSQL, Babel, Jest*

- Built a cross platform web application displaying pet health insights using metrics collected from a physical automatic feeder
- Designed system architecture and PostgreSQL schema, created RLS policies, and implemented secure user authentication flows
- Integrated OpenAI API to generate personalized suggestions for meeting user specified cat health goals

Electronic Voting System – Full Stack Web App | *React, PostgreSQL, CI/CD, Babel, Jest*

- Architected and developed a secure electronic voting platform with React frontend and PostgreSQL backend
- Led a 3-person development team using agile sprint methodology, delivering a working MVP within a single semester
- Implemented authentication with role-based access control for Admin, Manager, and Voter roles
- Built a modular React component library and implemented dynamic routing with React Router
- Established CI/CD workflows with automated testing and enforced code quality using ESLint

Infrared Safety Break Detector | *ESP32, Embedded C, Signal Processing*

- Developed a real time infrared beam interruption detection system using photodiode input and ESP32 ADC sampling
- Designed a multi-stage analog front end and sixth order digital filter to achieve stable low latency detection in noisy environments
